

For immediate Release.

NEW at ARAB HEALTH in Dubai from January 26 – 29, 2003.

- INFECTION CONTROL UNITS -

The risk of getting infected has become a serious problem all around the world, especially in the medical environment.

International scientific & medical publications come to the same conclusions; tremendous social, human and financial losses as well as a large drain on all healthcare resources due to hospital acquired infections.

Especially airborne infections are a major problem with increasing air pollution, a rising number of patients with immune system deficiencies and multi-resistant species.

Airborne infections are easy to acquire, simply through inhalation.

Patients that are immune-compromised like in ICU's, burn-units, bone marrow transplant, leukaemia, lung transplant etc. are particularly susceptible.

The problem of airborne infections has always been difficult to solve as they are not limited to 'the sources' of contamination but as they spread to other areas not stopped by 'boundaries'.

Traditional methods to prevent the spreading of airborne infections (such as tuberculosis, aspergillus, chicken pox, and all other kinds of bacteria) have proven to be impractical or are just economic unfeasible.

MedicCleanAir® Organisation, specialist in air-cleaning, introduces at ARAB HEALTH a unique device that reduces the risk of airborne infections dramatically.

The results achieved by MedicCleanAir® - Infection Control Units - have been proven by the medical scientific environment in scientific clinical studies.

These studies have been presented at international symposia on Infection Control Methods and published in esteemed magazines like the Journal of Hospital Infection - Hospital Infection Society.

Some of the high-lights are:

- A general reduction of airborne contamination by over 90 %
- Elimination of infections in Intensive Care Units - Bone Marrow Transplant
- In I.C.U. savings of over us\$ 160.000 in one year.

MedicCleanAir® organization was founded in 1994 and co-operates with independent scientific institutes and professionals in healthcare.

MedicCleanAir® invites professionals in healthcare to visit them at ARAB HEALTH - Hall 3 -

Stand nr 3219.
